SKILLS

Languages
TypeScript, JavaScript, Python, Go, Java, C#, PHP (basic)

Frontend / Mobile
React, Vue, Vite, HTML, CSS, Expo

Backend
Node.js, NestJS, FastAPI, REST APIs, systems integration

Databases
PostgreSQL, MariaDB, SQL, data modeling

DevOps
Docker, Kubernetes, Linux, Git/GitHub, Vercel

Testing
pytest, Vitest, Playwright, GitHub Actions

Observability
Grafana, Zabbix, DataMiner, OpenSearch, Graylog, Calicux

Telecom
IPTV, OTT, networking, Nokia, Cisco, Huawei

AI
AI agent integration

LANGUAGES

Portuguese	Native
English	Advanced

FRONTEND · BACKEND · DEVOPS · OBSERVABILITY

Summary

Full stack developer with 6 years at Telefônica/Vivo, one of Brazil's largest carriers, growing from L1/L2 technical support into systems development, integrations and automation on the Digital Transformation team. My background in TV operations (IPTV/OTT) brings hands-on experience with incidents, KPIs and SLAs.

I build end-to-end applications, from React front ends to Node.js and Python APIs, deployed on Docker and Kubernetes, and integrate AI agents into operational workflows.

Experience

Telefônica Brasil (Vivo) — Curitiba, Brazil

Junior Telecom Analyst — Mar 2025 – Present

Digital Transformation Team · Transport and Infrastructure Engineering

- Build connectors and integrations between internal systems, deployed with Docker and Kubernetes.
- Integrate AI agents into network and infrastructure operations workflows.
- Built an infrastructure monitoring system (Node.js, TypeScript, React) on the Calicux API.
- Developed a Speedtest/Ookla API in Python, with ingestion and analysis in OpenSearch and Graylog.

Telecom Technician (Mid-level) — Mar 2023 – Feb 2025

TV Transformation O&M

- Automated manual routines for the VOC (IPTV) team after mapping L1 activities.
- Developed the VOC/Carimbo web application (TypeScript, React, database).
- Built the TV/Broadband affected-customer KPI together with the Quality team.

L1/L2 Technical Support — Nov 2020 – Feb 2023

TV Operations · IPTV/OTT

- Monitored mission-critical TV platforms (IPTV/OTT) with Grafana, Zabbix and DataMiner.
- Handled incidents on Nokia, Cisco and Huawei equipment.
- Tracked operational KPI and SLA performance.

Education

Graduate Certificate in Systems Development with Python	In progress
B.Sc. Software Engineering — Estácio	Apr 2025 – Apr 2029 (expected)
Associate Degree in Systems Analysis and Development — Unicesumar	Jan 2024 – Jul 2026 · completed
Associate Degree in Mechatronics — IFSP	Completed

Certifications (Udemy)

Databases · Linux · Web Development

Kawan Victor Cavalcante

Full Stack Developer · Frontend · Backend · DevOps · Observability

Selected projects

Projects built at Telefônica/Vivo and open-source personal projects.

Infrastructure Monitoring — TELEFÔNICA/VIVO

Infrastructure monitoring dashboard integrated with the Calicux API, bringing environment status into a single web interface.

Node.js · TypeScript · React · Calicux API

Speedtest/Ookla API — TELEFÔNICA/VIVO

API for collecting and analyzing network speed tests, with data ingestion into OpenSearch and querying through Graylog.

Python · OpenSearch · Graylog

VOC/Carimbo — TELEFÔNICA/VIVO

Web application for Vivo's internal VOC team, focused on IPTV, with a React front end and database persistence.

TypeScript · React · Database

VOC Automation — TELEFÔNICA/VIVO

Automated routines for the VOC (IPTV) team, based on mapping L1 activities and defining KPIs and SLAs.

Automation · KPI/SLA · Processes

TV/Broadband KPI — TELEFÔNICA/VIVO

Affected-customer metric for TV and broadband services, built together with the Quality team.

Metrics · Quality · Data

PC Control Center — PERSONAL PROJECT

Windows monitoring and customization hub with real system data: performance, network, desktop widgets and one-click scenes. Ships with an installer.

Python · PySide6 · SQLite · ruff + mypy

github.com/KawanVictor/PC-Control-Center

DESTRUCTOR — PERSONAL PROJECT

Browser-based 2D action game: build defenses and hold off waves of enemies. Works on mobile and is tested on every push.

TypeScript · Phaser 3 · Vitest · Playwright

game-destructor.vercel.app

SQL-Interface — PERSONAL PROJECT

Turns questions in Portuguese into parameterized SQL over broadcast failure logs, with a parser, a validator and a web UI.

Python · FastAPI · React · Docker

github.com/KawanVictor/SQL-Interface
